

Robert Weeden

AI Automation Engineer

Madison, Wisconsin | hello@robertjw.dev
www.robertjw.dev | github.com/weedenrj

Summary

AI automation engineer and full-time startup developer focused on how software gets built. I connect business requirements, codebases, and AI workflows to deliver product features, reduce repetitive work, and make systems easier to maintain. Software development experience since July 2021.

Experience

Vally | Startup developer | Current, full-time

Joined as the second engineer. During my time at Vally, the platform grew from about two customers to nearly 500 businesses. Work on a three-engineer team building scheduling, booking, payments, and customer tools. Build product features, investigate and fix bugs, and improve developer systems. Focus on developer-agent interactions, simplifying the codebase for automation, and connecting business information to useful workflows.

Tesseract Corporation | Senior Full-stack Engineer | Previous

Built web applications for Vally Pro and Eternity RPG, with responsibility for client-side stability, performance, design, and features.

Implemented Next.js pages, browser caching and storage, and progressive web application capabilities. Translated business requirements and user feedback into application improvements.

Sage Labs | Junior React Engineer & Co-founder | July 2021 - June 2022

Built web applications and smart contract integrations on Ethereum and Stacks. Planned, developed, tested, and delivered contracted web projects.

Selected work

The Red Shed: small business website with owner-managed content. Brodhead Aviation: small business website for aircraft restoration and maintenance. Eternity RPG: browser game built with a small team using React, Redux, and Phaser.

Technical experience

AI-assisted development and workflow automation; TypeScript, React, Next.js, REST APIs, OAuth, progressive web applications, browser caching, Tailwind CSS, Redux, and Phaser.

Education

University of Wisconsin Oshkosh | B.S. Computer Science | May 2022
